RENTAL MARKET REPORT
London CMA
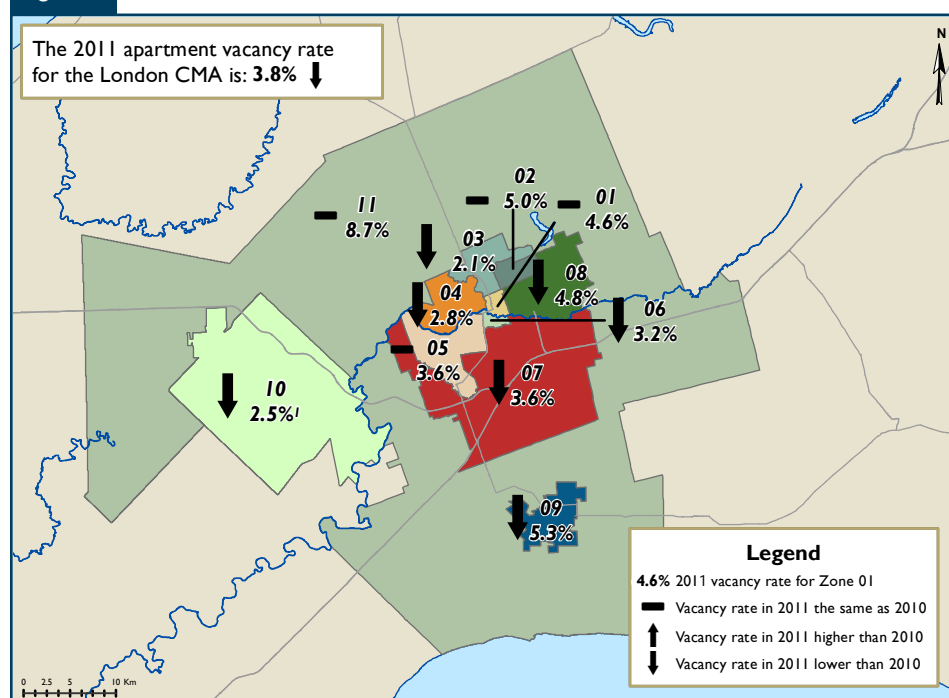

CANADA MORTGAGE AND HOUSING CORPORATION

Table of Contents

Date Released: Fall 2011

Highlights

- London's apartment vacancy rate declined to 3.8 per cent in October 2011 from 5.0 per cent one year earlier as demand from empty nesters and young adults outweighed the added new supply.

- On the basis of sample structures common to both the 2010 and 2011 surveys, London's average two-bedroom rent increased by 0.8 per cent.

- The slow movement from rental to ownership as well as more people in the prime renting age groups will bring the vacancy rate lower to 3.6 per cent in 2012.

Vacancy Rate Declines

The apartment vacancy rate in the London Census Metropolitan Area (CMA) declined more than one percentage point to 3.8 per cent in October 2011. On the demand side, a slowdown in the movement of renters into homeownership, along with demographics favouring rental tenure contributed to the drop. The decline in the proportion of resale homes sold in the lower price ranges in 2011 indicates reduced activity by first-time buyers in the London market. On the supply side, fewer newly completed buildings were added to the stock.

Employment and demographics support rental demand

Employment for the 25-44 year age group in the London CMA has increased over the past year. In addition the number of people in the younger part of this group (25-34) will continue to grow for the better part of the next decade. This group includes many young people still living at home who now have the money to move out and start their own household.

London seniors have the highest propensity to rent in Ontario, but that propensity has been declining as many stay in their homes longer. However, the strong growth in the actual number of senior households, and hence senior renters, more than offset the declining propensity.

Other factors were not as supportive of rental demand and likely exerted upward pressure on the vacancy rate. Immigration was down over 20 per cent provincially over the past year and since London is one of the top three destinations in Ontario outside of the greater GTA for new immigrants, it is likely that London experienced a decline as
well. Immigrants tend to rent for the first few years after their arrival in Canada and hence have an important impact on the rental market. Most of London's international migrants are from Latin America, the Middle East and Asia-Pacific. London's net population gain was also reduced in

2011 as some Londoners moved out of province in search of work.

Another factor acting upon on vacancy rates was new supply. London is one of the few major markets in Southern Ontario to have had ongoing rental construction over the last decade which was one of the

Figure 2

Vacancy Rate Declines

Figure 3

London Seniors Like to Rent

Source: Statistics Canada

contributing factors to the increase in the vacancy rate in 2010. There were 648 new rental apartment units completed up to June 2011, the cut-off period to be included in the October 2011 Rental Market Survey. Including these units and other adjustments resulted in the universe increasing by 775 units. New rental units are direct competition for the existing stock. However this was the lowest addition of new stock to the rental universe since 2007. London currently has the lowest level of rental apartment units under construction since 2002.

Availability rates mirror vacancies

The overall availability rate for private rental apartments in the London CMA moved lower from 7.4 per cent in 2010 to 5.8 per cent in 2011, indicating that fewer people were intending to move. Availability rates were lower for all unit types, however units with three or more bedrooms had the smallest decrease. Renters occupying these larger units are usually the most likely to be contemplating a move to homeownership. The availability rate declined more than the vacancy rate, indicating that re-renting units when existing tenants gave notice became somewhat more challenging.

Rent increase in line with guideline

The average rent for two-bedroom apartments in buildings that were surveyed in both 2010 and 2011 increased 0.8 per cent in the London CMA, down from 1.1 per cent in October 2010. The increase almost matched the Residential Tenancies

Figure 4

International Migration Stabilizes

Source: Statistics Canada
Act (RTA) guideline of 0.7 per cent. A lower rent review allowable guideline increase in 2011, high vacancies and less turnover put a lid on rent increases in the London market.

Rental trends by submarket

According to the WIL 2011 Annual Report[1], the bulk of new international migrants which were served by the agency settled in west London. Newcomers often choose to live within the established ethnic communities in this area and this would have contributed to the decline in the vacancy rate in Zone 4 Northwest from 3.9 to 2.8 per cent. The lowest vacancy rate was in Zone 3 – North by the University which dropped one per cent to 2.1 per cent. The University of Western Ontario had its largest first year enrolment class in 2011 at 5,100 students. Exisiting residences are at over capacity and in response a new 1,000

bed residence is under construction to open in September 2013. Many students turned to the private rental market for accommodation contributing to the lower vacancy rate, particularity one bedroom units in Zone 3 at 1.0 per cent.

Rent increases of note include those for one and two bedroom units in Zone 6 –Central South, which increased 3.6 per cent and 4.9 per cent respectively. This area, also known as Old South, has become very popular because of the ambience in the area. Since there are relatively few rental apartments in the area, the increase in popularity is leading to rent increases.

Rental affordability declines

The rental affordability indicator in London declined slightly between October 2010 and 2011 as households needed to spend

[1] WIL Counselling and Training for Employment and WIL Employment and Learning Resources Corporation (operating as WIL Employment Connections) are non-profit organizations dedicated, primarily, to facilitating the economic and social integration of immigrant women and men and Canadian women and men into the broader community of London and area.

slightly more of their income to cover the rent on a two bedroom apartment. The indicator was under 100 in October 2011, indicating rent represented more than 30 per cent of renters' income.

Rental Market Outlook

The vacancy rate for private rental apartments in the London CMA will move down slightly to 3.6 per cent in 2012 as demand continues to expand from new Londoners, students and empty nesters. Reduced movement from rental to homeownership will also keep downward pressure on the vacancy rate. Although low mortgage rates and little price appreciation will keep ownership housing affordable, weak employment growth will limit the number of potential first-time buyers able to make the transition to homeownership.

On the supply side, there are currently less than 650 private rental apartment units under construction. Anticipated rental completions over the next several months could create some competition for existing landlords

Figure 5

Rental Starts Drop

Source: CMHC
but the level of new supply will be down compared to what the market has absorbed over the last several years. New apartment condominiums under construction will only have a minimal impact on the rental market as they are targeted to people in higher incomes with a preference for homeownership. The average two bedroom apartment rent will rise to

$899, as lower vacancies and a higher provincial guideline increase support stronger growth in rents.

National Vacancy Rate Decreased in October 2011

The average rental apartment vacancy rate in Canada's 35 major centres[1] decreased to 2.2 per cent in October 2011 from 2.6 in October 2010. Immigration and increased employment in the under 25 years age group have been factors supporting demand for rental units.

The major centres with the lowest vacancy rates in October 2011 were Regina, (0.6 per cent), Winnipeg, Kingston and Guelph (1.1 per cent), and St. John's (1.3 per cent). The major centres with the highest vacancy rates were Windsor (8.1 per cent), Abbotsford (6.7 per cent), Saint John (5.9 per cent), Sherbrooke (4.7 per cent), and Moncton (4.3 per cent).
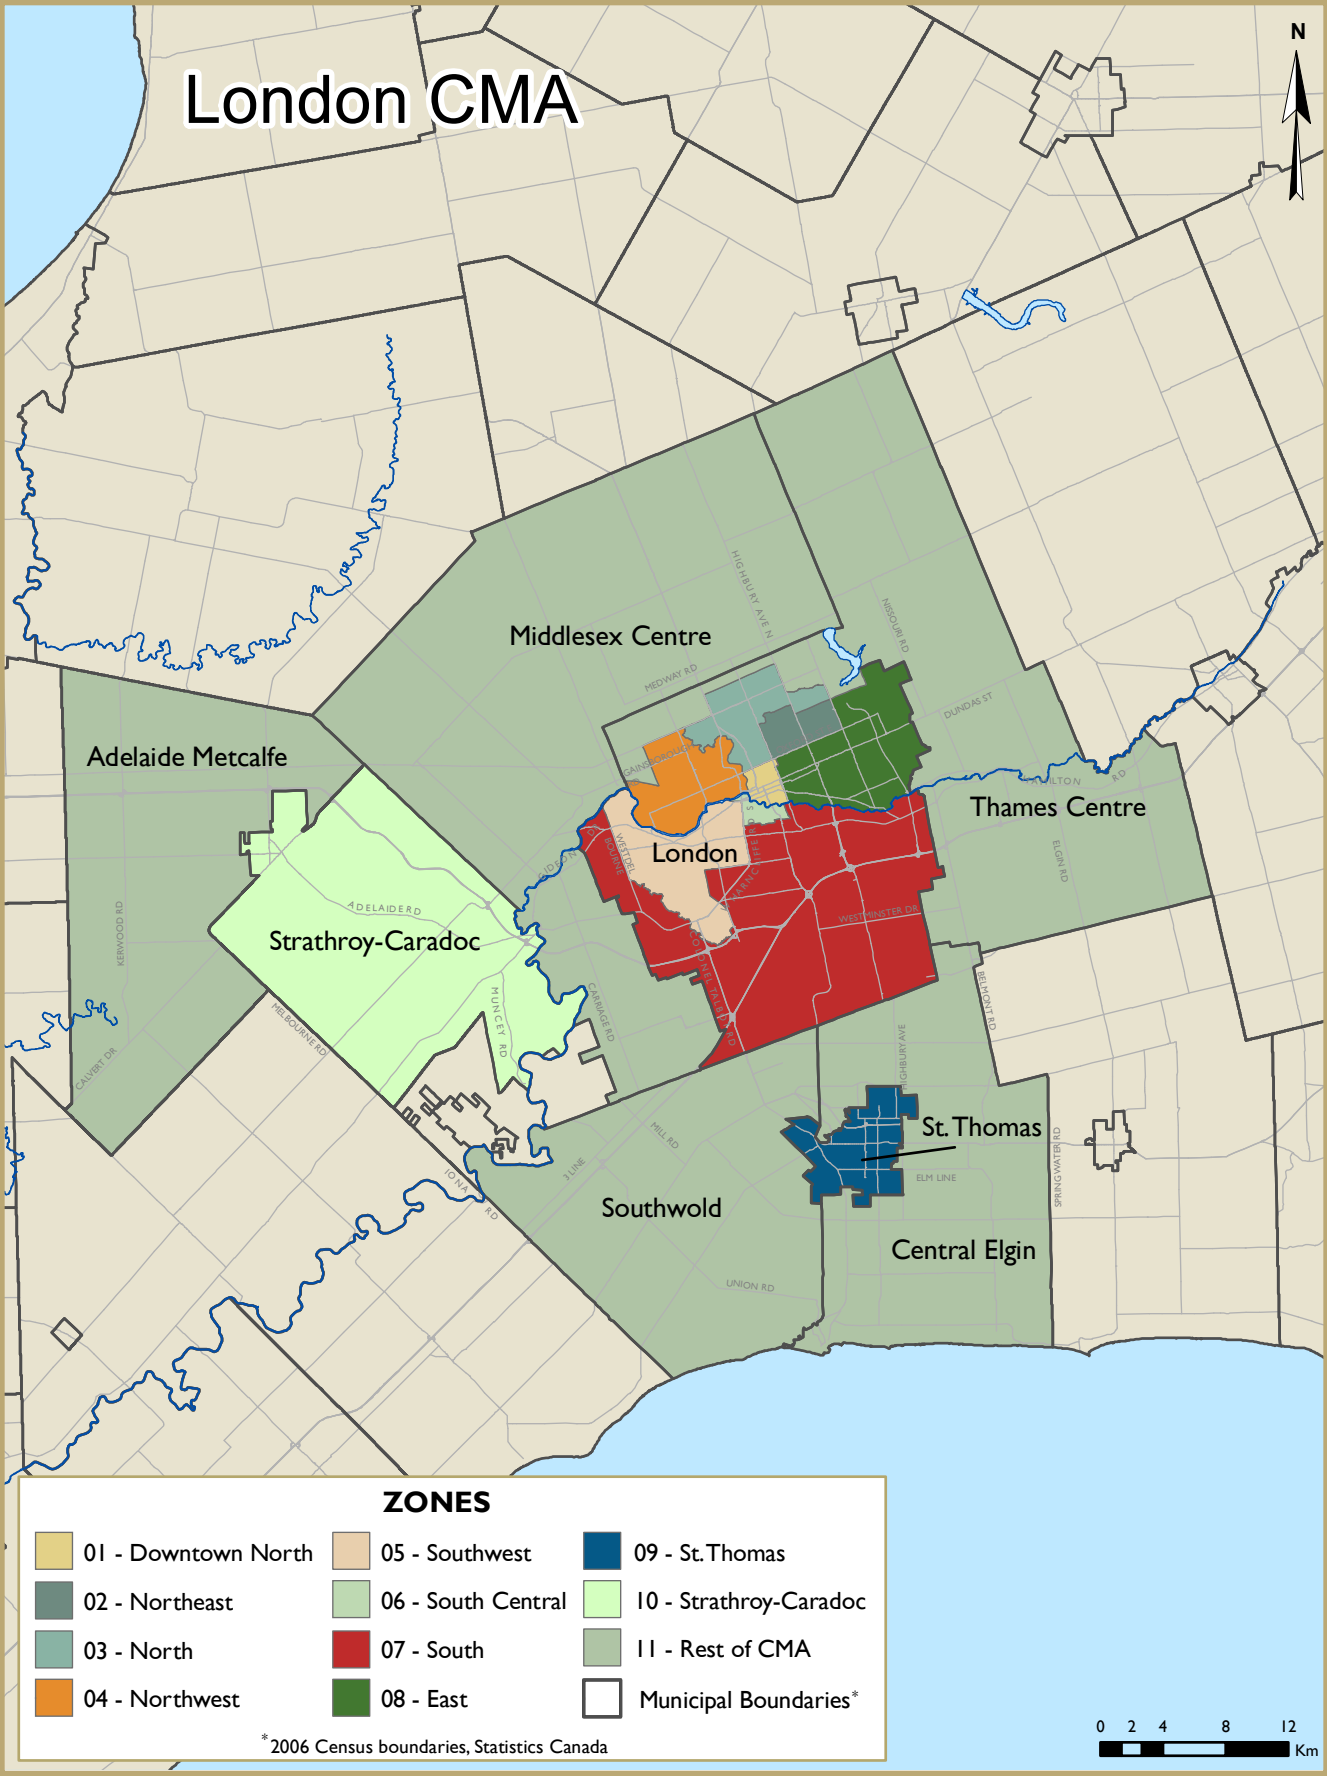

The Canadian average two-bedroom rent was up from $860 in October 2010 to $883 in October 2011. With respect to the CMAs, the highest average monthly rents for two-bedroom apartments in new and existing structures in Canada's major centres were in Vancouver ($1,237), Toronto ($1,149), Ottawa ($1,086), Calgary ($1,084), Victoria ($1,045), Edmonton ($1,034) and Barrie ($1,001). The lowest average monthly rents for two-bedroom apartments were in Trois-Rivières ($547), Saguenay ($557), and Sherbrooke ($577).

Overall, the average rent for two-bedroom apartments in existing structures across Canada's 35 major centres increased 2.2 per cent between October 2010 and October 2011, a similar pace of rent increase to what was observed between October 2009 and October 2010 (2.4 per cent) and roughly in line with inflation (2.9 per cent).

CMHC's October 2011 Rental Market Survey also covers condominium apartments offered for rent in Victoria, Vancouver, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal, and Québec. Vacancy rates for rental condominium apartments were 2.0 per cent or below in 7 of the 11 centres surveyed. Rental condominium vacancy rates were the lowest in Saskatoon (0.4 per cent), Regina (0.6 per cent), and Vancouver (0.9 per cent). The highest vacancy rates for rental condominium apartments occurred in Calgary (5.7 per cent), Edmonton (3.7 per cent), and Montréal (2.8 per cent).

Apartment Vacancy Rates (%) by Major Centres		
	Oct. 2010	Oct. 2011

[1]The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:
a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)
** Data suppressed to protect confidentiality or data not statistically reliable.
++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).
n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

[1]The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:
a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)
** Data suppressed to protect confidentiality or data not statistically reliable.
++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).
n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

Please click Methodology or Data Reliability Tables Appendix link for more details

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: $500 in the previous year vs. $550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights , Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

• Rented single-detached houses.
• Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
• Rented freehold row/town homes.
• Rented duplex apartments (i.e.. one-above-other).
• Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
• Rented condominiums (can be any dwelling type but are primarily apartments).
• One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

• A Household Rent Survey of all households to collect information about rents.
• A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
• A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montréal, Ottawa, Québec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. A centre's median income is divided by the level of income required for a household to rent a median priced two-bedroom apartment using 30 per cent of income. The result is then multiplied by 100. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable. For years for which the median income is not available, CMHC has developed forecasts.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2009. CMHC has developed forecasts of median renter household income for 2010 and 2011. It should be noted that nominal values for both median rent and median incomes have been used to calculate the rental affordability indicator.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
