“Rising costs of homeownership and lack of new rental supply kept vacancy rates at historic lows.”

**Dana Senagama**  
Principal, Market Analysis, CMHC

\*CMHC collects data on the primary and secondary rental market annually, in the fall. These data refer to the primary rental market, which only includes rental units in privately-initiated apartment structures containing at least three rental units. The secondary rental market covers rental dwellings that were not originally purpose-built for the rental market, including rental condominiums. The primary vacancy rate and rent level is based on all surveyed structures, while the rent increase is based only on structures common to the survey sample in both the current and previous year.

## Key Analysis Findings

- Toronto CMA primary vacancy rate reached a 16-year low at 1.0%
- Homeownership affordability concerns kept more households in rental
- Supply of new private purpose-built rental units was insufficient to meet growing demand
- Condominium apartments continued to act as the de-facto new rental accommodation supplier

## More Households Chose To Rent In The Primary Rental Market

Rising costs of homeownership forced more people to seek and remain in rental accommodation. The resulting average vacancy rate for private purpose-built apartments in

the Toronto CMA declined to reach its lowest level in 16 years. House prices in the Greater Toronto Area (GTA) reached unprecedented levels during the early part of 2017, making homeownership out of reach for the majority of potential first-time buyers. Although house prices came off their peak following the announcement of the Fair Housing Plan in April by the Ontario Government, they still remained above their 2016 levels and the required income to purchase a home remained well above the actual average income. Additionally, prices of multiple-family dwellings (such as condominium apartments and townhouses), which are typically more popular among first-time homebuyers, showed greater resilience and remained high. The decline in the turnover rate, which dropped by 140 basis points to 14.5% in 2017, was another indication that more households were choosing to stay in rental accommodation.

## Rent Increases Above Guideline

Although fewer renters moved out of their apartments this year, very tight market conditions allowed landlords to charge new tenants significantly higher rents, which led to the average rent growth to be above the provincial guideline, which was 1.5 % in 2017. Rising home prices also gave landlords capacity to raise rents for new tenants and still remain competitive. Major repairs, renovations and replacement investments by property-owners may have also been factors for stronger rent increases in 2017.

## More Migrants Support Rental Demand

Strong migration flows continued to boost rental demand. Over the past two years, the Toronto CMA experienced a spike in international migration, as improved economic conditions made the area more attractive for immigrants. Typically, newcomers rent for a period of time upon first arriving in Canada prior to entering the homeownership market. Furthermore, some refugees who lived in the temporary housing upon arriving in 2016 were in a position to move into traditional

\*GTA fixed sample two-bedroom apartment rent

rental accommodation this year. International student enrollment increased and resulted in stronger rental demand in many communities across the province, including Toronto. Temporary foreign workers, whose levels were high from a historical perspective, had also been an important source of demand for rental housing.

## Primary Rental Supply Growth Lagging Demand

While developers had responded to growing demand for rental properties and benefited from favourable lending conditions in recent years, increases in rental supply was not enough to meet the growing demand and avert a decline in the average vacancy rate. Demand particularly grew for newer rental accommodation, which offered modern features and amenities and were priced similar to rental condominium apartment units. In 2017, the number of purpose-built private rental units under-construction surpassed 7,000 - its highest level ever. Developers completed construction of 2,243 rental units over the 12-month period ending June 30, 2017 (the cut-off point for the survey) up 31 % than over the same period a year earlier. However, this pace of completions was modest relative to the record number of units currently under construction and not significantly above the past 10-year annual average of 1,800 units. Thanks to new completions and some existing rental projects becoming operational again, the rental apartment universe in the GTA increased by 2,577 units.

## Continued Strength In The Condominium Apartment Market

GTA rental condominium apartments, which were subject to similar trends as their purpose-built comparable

Figure 2

Figure 3

Source: CMHC Rental Market Survey

units, saw their average vacancy rate drop to its lowest rate in nine years. Nevertheless, the share of rented condominium apartments as part of the total condominium apartment stock (a good proxy for investor activity) remained virtually on par with that of last year. In the 12-month period ending May 2017, the cut off point for the condominium survey, 19,234 condominium apartment units

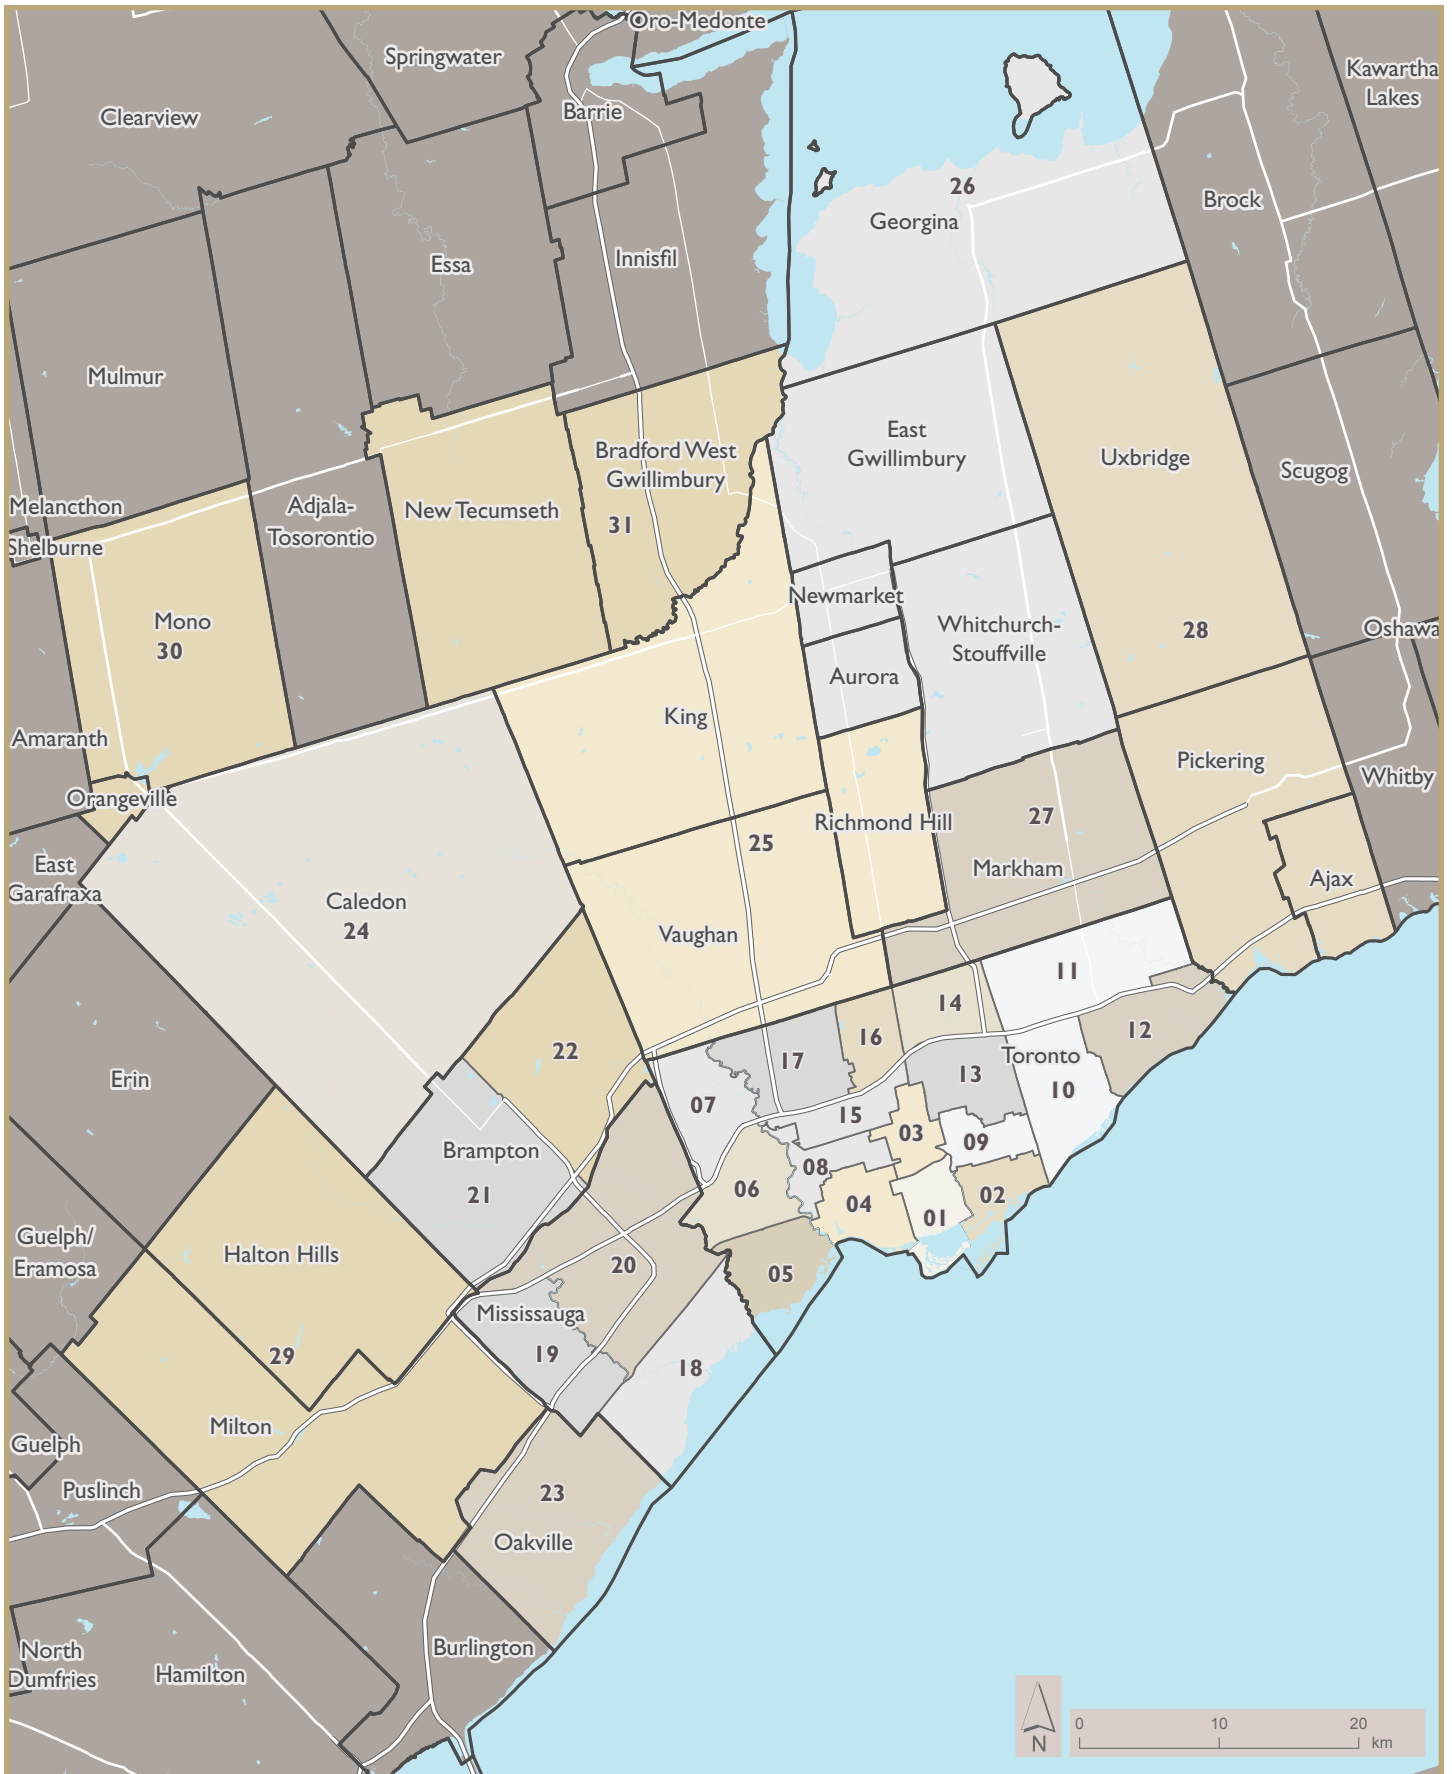

reached completion in the GTA. Its share of leased units edged lower to 47.9 % in 2017 from 49.7 % in 2016 – restraining the increase in the rented stock. Furthermore, faced with uncertainty in the housing market in light of softening house prices following policy changes introduced this year, some condominium apartment investors chose to exit the market. Owners of rental

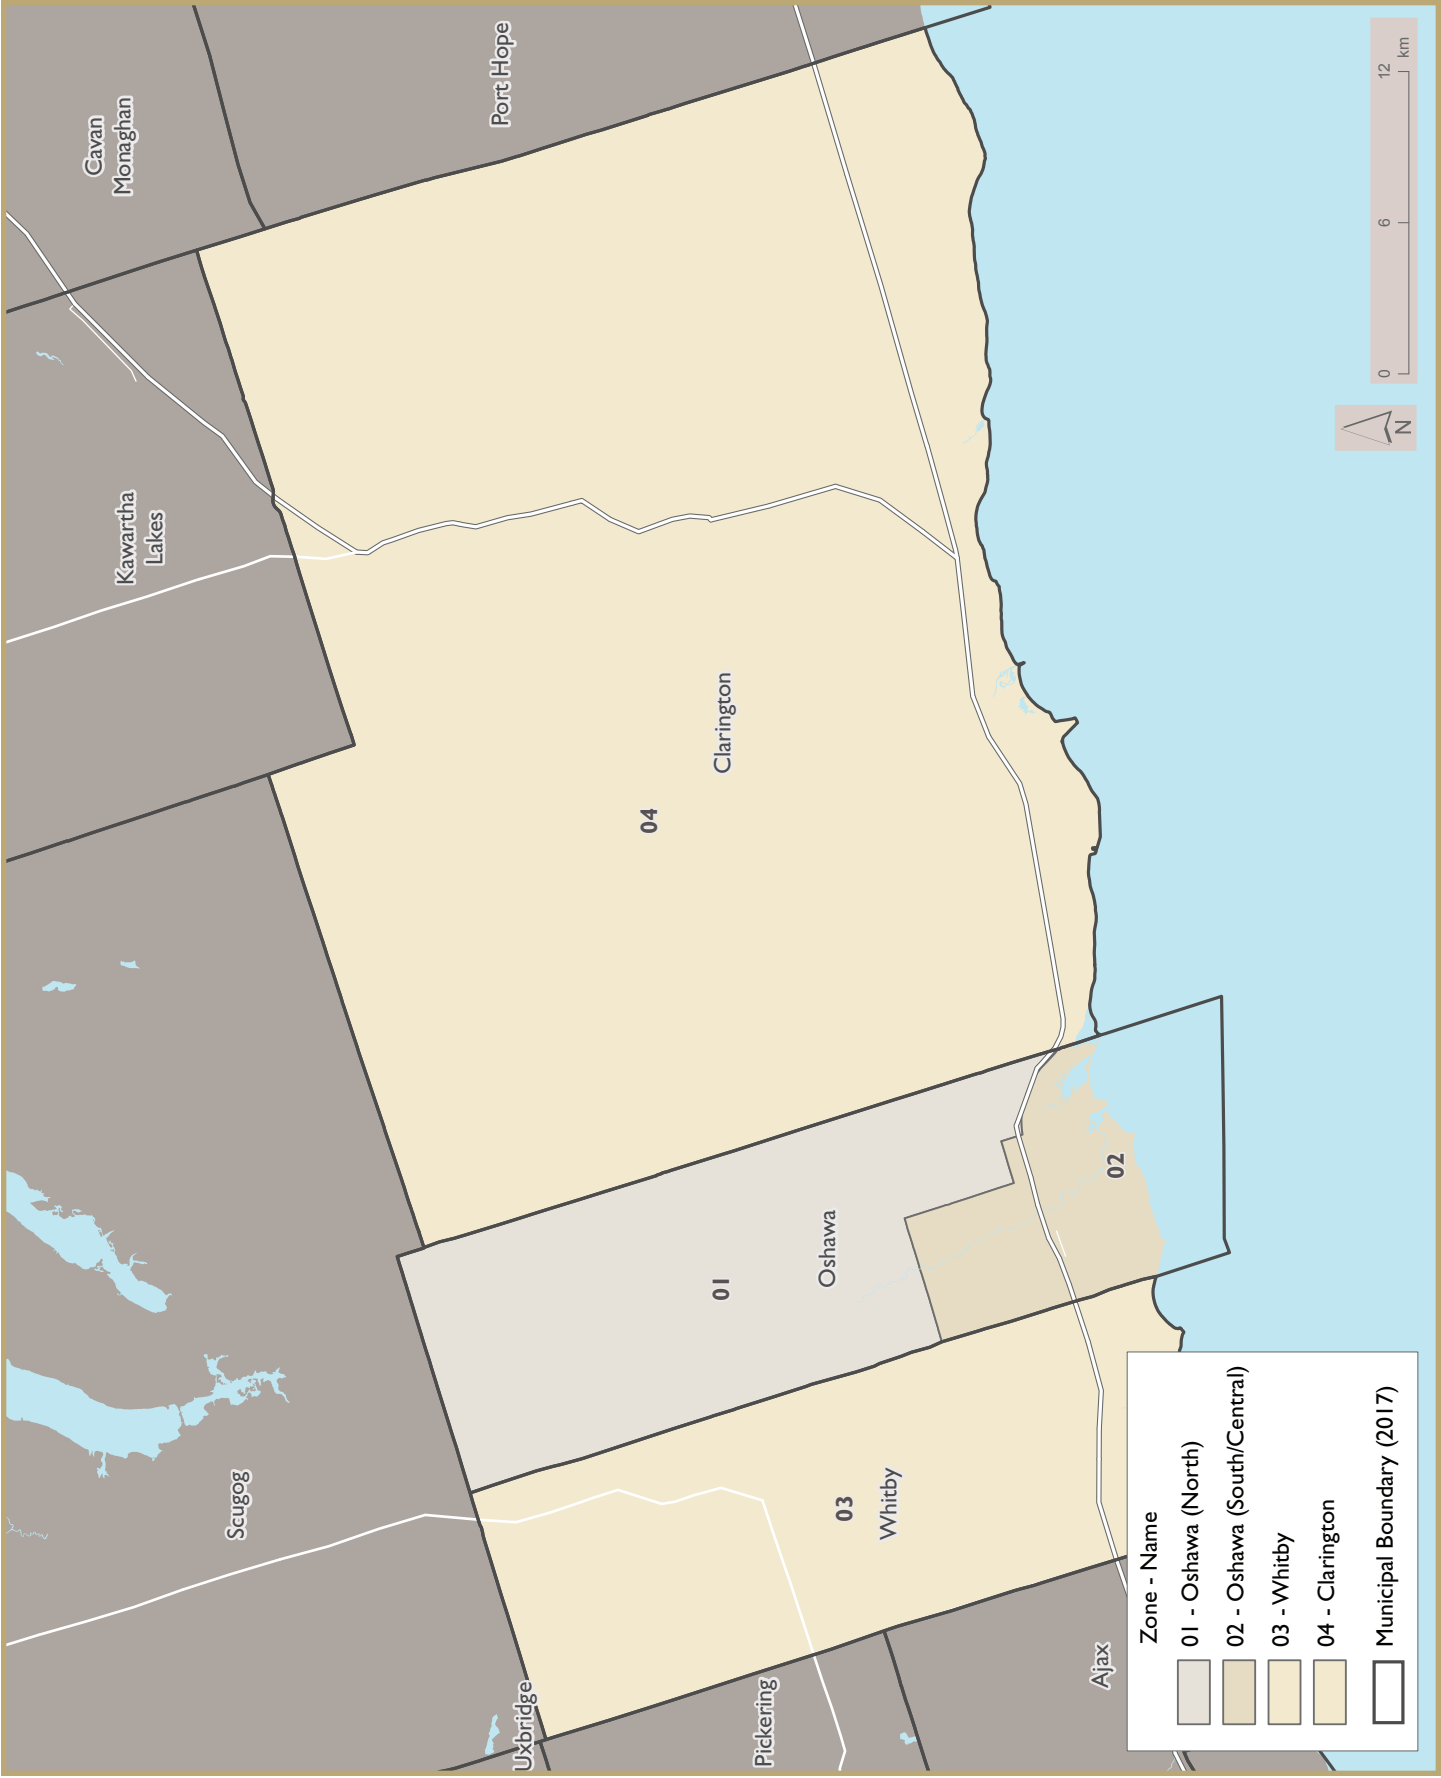

condominiums were encouraged to cash-in on their properties by selling their newly completed units to owner-occupiers looking for more affordable housing options. Rising house prices of low rise homes across the GTA encouraged more homebuyers to choose condominium apartments as their preferred option, thereby making fewer units available for rental. As a result, the rental condominium apartment stock grew by just 5% in 2017 (compared to 14% in the previous year).

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent levels, availability (outside Quebec), turnover and vacancy unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy, availability (outside Quebec), and turnover rates and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of percent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports. The rent levels in new and existing structures are also published. While the percent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR CONDOMINIUM APARTMENT SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the Condominium Apartment Survey (CAS) in late summer and early fall to estimate the relative strengths in the condo apartment rental market. The CAS collects the number of units being rented out and the vacancy and rent levels of these units in the following CMAs: Calgary, Edmonton, Gatineau, Halifax, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg. The CAS is conducted by telephone interviews and information is obtained from the property management company, condominium (strata) board, or building superintendent. If necessary, this data can be supplemented by site visits if no telephone contact is made.

CMHC publishes the number of units rented, vacancy rates and average rents from the Condominium Apartment Survey. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

## RENTAL MARKET SURVEY (RMS) AND CONDOMINIUM APARTMENT SURVEY (CAS) DATA RELIABILITY

CMHC does not publish an estimate (e.g. Vacancy Rates and Average Rents) if the reliability of the estimate is too low or the confidentiality rules are violated. The ability to publish an estimate is generally determined by its statistical reliability, which is measured using the coefficient of variation (CV). CV of an estimate is defined as the ratio of the standard deviation to the estimate and CV is generally expressed a percentage. For example, let the average rent for one bedroom apartments in a given CMA be  $\bar{x}$  and its standard deviation be  $\sigma_{\bar{x}}$ . Then the Coefficient of Variation is given by  $CV = \frac{\sigma_{\bar{x}}}{\bar{x}}$ .

### Reliability Codes for Proportions

CMHC uses CV, sampling fraction and universe size to determine the ability to publish proportions such as vacancy rates, availability rates and turnover rates. The following letter codes are used to indicate the level of reliability of proportions:

a — Excellent

b — Very good

c — Good

d — Fair (Use with Caution)

\*\* — Poor — Suppressed

++ — Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- — No units exist in the universe for this category

n/a — Not applicable

The following two tables indicate the level of reliability of proportions:

If the proportion is Zero (0) and sampling fraction is less than 100% then the following levels are assigned:

#### Sampling Fraction (%) range

Structures in Universe	(0,20]*	(20,40]	(40,60]	(60,80]	(80,100)
3 – 10	Poor	Poor	Poor	Poor	Poor
11 – 20	Poor	Fair	Fair	Fair	Good
21 – 40	Poor	Fair	Fair	Good	Very Good
41 – 80	Poor	Fair	Good	Good	Very Good
81+	Poor	Good	Good	Very Good	Very Good

\*(0, 20] means sampling fraction is greater than 0% but less than or equal to 20%; others are similar.

Otherwise, the following table is used to determine the reliability level of proportions:

#### Coefficient of Variation (CV) %

Vacancy Rate	0	(0,5]	(5,10]	(10,16.5]	(16.5,33.3]	(33.3,50]	50+
(0,0.75]	Excellent	Excellent	Excellent	Excellent	Excellent	V. Good	V. Good
(0.75,1.5]	Excellent	Excellent	Excellent	Excellent	Excellent	Fair	Poor
(1.5,3]	Excellent	Excellent	Excellent	V. Good	Good	Poor	Poor
(3,6]	Excellent	Excellent	V. Good	Good	Fair	Poor	Poor
(6,10]	Excellent	Excellent	V. Good	Good	Poor	Poor	Poor
(10,15]	Excellent	Excellent	Good	Fair	Poor	Poor	Poor
(15,30]	Excellent	Excellent	Fair	Poor	Poor	Poor	Poor
(30,100]	Excellent	Excellent	Poor	Poor	Poor	Poor	Poor

## Reliability Codes for Averages and Totals

CMHC uses the CV to determine the reliability level of the estimates of average rents and a CV cut-off of 10% for publication of totals and averages. It is felt that this level of reliability best balances the need for high quality data and not publishing unreliable data. CMHC assigns a level of reliability as follows (CV's are given in percentages):

- a — If the CV is greater than 0 and less than or equal to 2.5 then the level of reliability is **Excellent**.
- b — If the CV is greater than 2.5 and less than or equal to 5 then the level of reliability is **Very Good**.
- c — If the CV is greater than 5 and less than or equal to 7.5 then the level of reliability is **Good**.
- d — If the CV is greater than 7.5 and less than or equal to 10 then the level of reliability is **Fair**.
- \*\* — If the CV is greater than 10 then the level of reliability is **Poor**. (Do Not Publish)

## Arrows indicate Statistically Significant Changes

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes:

- ↑ indicates the year-over-year change is a statistically significant increase.
- ↓ indicates the year-over-year change is a statistically significant decrease.
- indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.
- △ indicates that the change is statistically significant

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Turnover:** A unit is counted as being turned over if it was occupied by a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12 month period.

## Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 50,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2016 data is based on Statistics Canada's 2011 Census area definitions. October 2017 data is based on Statistics Canada's 2016 Census area definitions.

## Acknowledgement

The Rental Market Survey and the Condominium Apartment Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution CMHC is able to provide information that benefits the entire housing industry.

## CMHC HELPS CANADIANS MEET THEIR HOUSING NEEDS.

Canada Mortgage and Housing Corporation (CMHC) has been helping Canadians meet their housing needs for more than 70 years. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer unbiased housing research and advice to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
